- Land use data provided by Helga Willer, Research Institute of Organic Agriculture (FiBL), Frick, Switzerland, www.fibl.org, based on data of the three certifiers.
- There was some insecurity regarding the total organic area according to the data of the certifiers, which
 are being clarified by FiBL and Bio Suisse. Thus, these totals were taken from the data of the Swiss Federal Office of Statistics BfS, Neuchatel, Switzerland, which provides data on the organically managed
 land (but no crop details) and farms for those organic farms, which receive direct payments from the
 government (which does, however, not cover all organic farms).

Uganda

- Data provided by: Charity Namuwoza, National Organic Agricultural Movement of Uganda (NOGAMU), PO Box 70071, Clock Tower, Kampala, Uganda, www.nogamu.org.ug. Data source: Operators. The data refer to 2007/2008.
- Cotton and sesame farmers account for about 60 % of the certified farmers and land in Uganda. This can be explained by the involvement of multinational cotton companies. There has also been a lot of organic certification support in the cotton projects since 1994 in the northern part of Uganda.
- Based on the figures of the NOGAMU shop, organic production for the local market accounts for about
 one percent of the total value. This affects formal certified products, but the majority of the organic
 products goes into informal local markets whose value was difficult to estimate but it was quite big.
 Products marketed locally include fresh and dried fruits (e. g. pineapples, papaya, apple, banana, mango,
 passion fruits and avocado), fresh vegetables (cabbage, carrots, broccoli, cauliflower, etc), wine, livestock
 products (eggs), shea butter, fruit juice- pineapples, gooseberry, passion fruits and spices (eg vanilla).
