Australia

Source

- › Land area and the number of producers are from 2009 based on figures from the Australian Quarantine and Inspection Service (AQIS) communicated by Wynen and Mitchell in this and earlier editions of "The World of Organic Agriculture".
- › Land use and crop data were taken from: Mitchell, A., Kristiansen, P., Bez, N. and Monk, A. (2010), Australian Organic Market Report 2010. Biological Farmers of Australia, Chermside. Please note that the crop data from the above mentioned study are based on a survey among producers in Australia, and only the data of those who responded to the survey are included. The data may therefore not be complete.
- › Domestic market value (2011/2012) according to Monk et al., quoted by Wynen and Mitchell in this volume.

Contact

- › Alexandra Mitchell, School of Rural Science and Agriculture, University of New England, Armidale, NSW Australia

Brazil

Sources

- › Land area and producers: The Brazilian government has provided for the first time data on certified organic agricultural land, but only for the fully converted area. This new figure (0.7 million hectares) is therefore not directly comparable with the figure for fully converted and in conversion land, that was communicated in previous

editions (2009-2012) of "The World of Organic Agriculture". The data communicated in the past were from 2007, and they were provided by Organics Brazil, www.organicsbrasil.org. They were based on information of the private certification agencies that are working according to international standards in Brazil. The data included the conversion areas. For historical comparability, the conversion area was taken out of the FiBL database as the new figure from the Ministry of Agriculture presented in this book excludes conversion areas. The official ministry figure for the certified organic land is 1.8 million hectares, which includes 1.2 million hectares of wild collection.

- › Export data: Instituto de Promoção do Desenvolvimento (IPD) (2010).

Note on area data

The latest available data are from 2010, and for 2010 no land use and crop data were available (neither for the wild collection areas). The breakdown of the agricultural land is therefore from 2009, but it should be borne in mind that the overall organic agricultural land increased substantially in 2010.

Note on producer data

No separate figure for the number of producers was available, the figure communicated is that for all operators in the country.

Mozambique**Sources**

Data were provided by two international certifiers and are from 2010.

Note

Some of the area data provided here are FiBL estimates based on the data from one certifier who, for some crops, only provided production volumes but no area data.
