- Graphs & Maps
- Data revisions
- News and background information
About this presentation

There are 3 presentations summarizing the key results of the FiBL survey on organic agriculture worldwide 2020 (data 2018). Apart from the global data, key results on crop and on regional data are presented. More information is available at www.organic-world.net

The following three presentations are available at http://www.organic-world.net/yearbook/yearbook2020/slide-presentations.html:

• Part 1: Global data from 2018 and survey background
• Part 2: Land use and key crops in organic agriculture in 2018
• Part 3: Organic agriculture in the regions in 2018
The 21st survey on organic agriculture worldwide

The 21st survey on organic agriculture worldwide was carried out by the Research Institute of Organic Agriculture (FiBL) in cooperation with partners from all around the world. The results were published jointly by FiBL and IFOAM – Organics International.

The survey was carried out between July 2019 and February 2020.

Data were received from 186 countries.

Updated data on area and producers were available for 142 countries.

Data was provided by over 200 country experts (representatives from NGOs, certification bodies, governments, researchers).

The following data was collected: area data (including land use and crop details); producers and other operator types; domestic market values; export and import data; and livestock data (head of livestock and production in metric tons);

The results are published in the yearbook “The World of Organic Agriculture 2020” and at www.organic-world.net.

General notes on the data

**Countries:** For countries and territories, the FAO country list is used. Where the designation "country" appears in this report, it covers countries or territories. For the countries’ grouping by region, the Standard Country and Area Classifications as defined by the United Nations Statistics Division, is used in most cases.

**Term organic:** In the tables, the term organic refers to the fully converted and in-conversion areas.

**Organic share:** In some cases, the calculation of the organic share of the total agricultural land or that of individual crops, based on FAOSTAT and in some cases the Eurostat data, might differ from the organic shares obtained from ministries or local experts.

**Producers:** Some countries report the number of smallholders while others only report the number of companies, projects, or grower groups, which may each comprise a number of producers. This applies in particular to many African countries. The number of producers is, therefore, probably higher than the number communicated in this report.

**Data revisions:** Should data revisions and correction become necessary these are communicated at the [data revision pages](http://www.organic-world.net/statistics/statistics-data-revisions.html?L=2) of Organic-World.net.

Key data/indicators on organic agriculture worldwide 2018

• 186 countries have data on organic agriculture.
• 71.5 million hectares of agricultural land are organic (including in-conversion areas).
• 16 countries have ten percent organic agricultural land or more, and 15 countries have between 5 and 10 percent organic agricultural land.
• There are almost 36 million hectares of further organic non-agricultural areas.
• 2.8 million producers were reported.
• Global organic market reached 96.7 billion euros.
World: Distribution of organic areas 2018

  - Cropland
    - Arable land (cereals, green fodders, oilseeds, etc.)
    - Permanent crops (olives, nuts, coffee, etc.)
    - Cropland, no details (arable land and permanent crops with no further details)
  - Permanent grassland
  - Other agricultural land
- Non-agricultural areas (35.7 million hectares in 2018)
  - Wild collection/Bee keeping (35.1 million hectares)
  - Forest
  - Aquaculture
  - Grazing areas on non-agricultural land

Agricultural land and crops 67%
Wild collection 32%
Other 0.6%

Source: FiBL survey 2020
Currently 71.5 million hectares are under organic agricultural management (end of 2018 for most data).

The distribution of the organic agricultural land is as follows:

- Oceania (16.0 million hectares);
- Europe (15.6 million hectares);
- Latin America (8.0 million hectares);
- Asia (6.5 million hectares);
- North America (3.3 million hectares);
- Africa (2.0 million hectares).

Oceania has half of the global organic agricultural land. Europe, a region that has had a very constant growth of organic land over the years, has over 22 percent of the world’s organic agricultural land followed by Latin America with 11 percent.

Apart from the organic agricultural land, there are further organic areas such as wild collection areas. These areas constitute more than 35.7 million hectares.
World: Organic agricultural land and other organic areas 2018

In Oceania there were 36 Mio ha, in Europe 15.6 Mio ha, and in Latin America 8.0 Mio ha.

The ten countries with the largest organic agricultural areas represent 79% of the world’s organic agricultural land.

16 countries have 10% or more of their agricultural land under organic management.

In 2018, over 2.0 million hectares more were reported compared with 2017.

World: The countries with the most organic agricultural land 2018

Australia is the country with the most organic agricultural land, 97 percent of which is estimated to be extensive grazing area. Argentina is second, followed by China in third place. The ten countries with the most organically managed agricultural land have a combined total of 56 million hectares and constitute three-quarters of the world’s organic agricultural land.

- Australia: 35.69 million hectares
- Argentina: 3.63 million hectares
- China: 3.14 million hectares
- Spain: 2.25 million hectares
- Uruguay: 2.15 million hectares
- France: 2.04 million hectares
- United States of America: 2.02 million hectares
- Italy: 1.96 million hectares
- India: 1.94 million hectares
- Germany: 1.52 million hectares
World: Share of organic land of total agricultural area 2018

1.5 percent of the global agricultural land is organic.

By region, the share is highest in Oceania (8.6 percent), followed by Europe with 3.1 percent and Latin America with 1.1 percent.

In the European Union, the share of organically managed land is 7.7 percent. In the other regions, the share of organically managed land is less than one percent.

Sixteen countries have 10 percent organic land or more, and 15 countries have between 5 and 10 percent organic land.

However, almost 57 percent of the countries for which data are available have less than one percent organic agricultural land.

The country with the highest share is Liechtenstein (38.5 percent), followed by the Samoa (34.5 percent) and Austria (24.7 percent).

It is interesting to note that many island states have high shares of agricultural land under organic management, such as Samoa and Sao Tome and Principe.

The eleven countries with the highest shares of organic agricultural land 2013.
Distribution of the organic shares of the agricultural land 2018

Source: FiBL survey 2020

- 100 countries; 57%
- 43 countries; 25%
- 15 countries; 9%
- 16 countries; 9%

- More than 10% organic
- Between 5-10% organic
- Between 1-5% organic
- Less than 1% organic
Organic agriculture land increased by 2.9% (2.02 million hectares) between 2017 and 2018.

Many countries reported a significant increase, for instance France (16.7 percent increase; over 0.29 million hectares more) and Uruguay (14.1 percent increase; almost 0.26 million hectares more). In addition, Argentina (7.2 percent increase; almost 0.24 million hectares more) and Viet Nam (almost 0.18 million hectares more) reported significant increases.

Compared with 1999, when 11 million hectares were organic, organic agricultural land has increased more than six-fold.

Ninety-eight countries experienced an increase in the area of their organic agricultural land, while a decrease was reported in 39 countries. In 41 countries, the organic agricultural area either did not change, or no new data was received.

World: Further organic areas

Apart from the organic agricultural land there are further organic areas; the largest part of these are wild collection areas and areas for beekeeping.

Further areas are aquaculture, forest and grazing areas on non-agricultural land.

It should be noted, that many countries do not report these areas, as they only communicate the agricultural land.

The total area for these areas was more than 35.7 million hectares. In total, 107.2 million hectares – agricultural land and other areas – were organic in 2018.
World: Wild collection and beekeeping areas

Over 35.1 million hectares of wild collection and beekeeping areas were reported for 2018.

The wild collection / beekeeping areas are distributed over four regions: Europe, Africa, Asia, and Latin America, reflecting quite a different pattern than that for agricultural land.

The collection of wild harvested crops is defined in the IFOAM Basic Standards (IFOAM 2014), and wild collection activities are regulated by organic laws.

World: Organic producers 2018

For the current survey, a total of 2.8 million organic producers was reported,

According to the data obtained, over 90 percent of the producers are located in Asia, Africa, and Europe.

The country with the most producers is India (1’149’371), followed by Uganda (210’352) and Ethiopia (203’602).

There was a decrease of more than 140’000 producers compared to 2017, or 5.0 percent.

It should be noted that not all certifiers reported the number of producers; the number is probably higher than 2.8 million.
The country with the most organic producers is India, followed by Uganda and Ethiopia.

More than 90% of the producers are in Asia, Africa, and Europe.

There has been an increase in the number of producers by almost 991,684, or over 55% over the past decade.

Source: FiBL-IFOAM-SOEL-Surveys 1999-2020
World: The global market for organic food and beverages 2018

- In 2018, the global market for certified organic food and drink was reached 96.7 billion euros.
- The turnover with organic products has increased more than eight fold since 2000.
- Almost ninety percent of the organic product revenues is made in the North America and Europe.
- In 2018, the largest market by far was the United States with 40.6 billion euros of organic food sales, followed by Germany with 10.9 billion euros and France with 9.1 billion euros.
- The highest annual per capita consumption was in Switzerland and Denmark (312 euros).
- Denmark, Switzerland, and Sweden have the highest share of organic food sales. In 2018 total food market value was not available for most of the countries, and it was therefore not possible to calculate the organic share for most countries.

Source: FiBL survey 2020
The largest single market is the USA (40.6 billion €) followed by the EU (37.4 billion €) and China. By region, North America has the lead (43.7 billion €), followed by Europe (40.7 billion €) and Asia.

The countries with the largest markets for organic food are the United States (41 billion €), Germany (11 billion €), France (9 billion €) and China (8 billion €).

Denmark and Switzerland have the highest per capita consumption worldwide, followed by Sweden, Luxembourg and Austria.

The highest organic share of the total market is in Denmark, followed by Switzerland, Sweden, Austria, and Luxembourg.

World: Organic farming in the DAC countries 2018

• Almost a quarter of the world’s organic agricultural land, 17.3 million hectares, is located in countries listed on the developing/transition countries and in emerging markets.* Almost half is located in Latin American countries (almost 8 million hectares), with Asia (6.5 million) and Africa (2.0 million) in second and third place.

• 2.4 million producers are in these countries.
